

Team Profile

Team Name: Kite Dreams

Personal Information

Zeyu Duanmu:

Hi, my teammates, I am Zeyu Duanmu(s3922517). I am a boy like most students studying Bachelor of IT. My birth date was in 2001. My hobbies are petting cats and drinking coffee. I am also an Anime fan. My favorite food is noodles. I am currently studying in an OLC (offshore learning center) set by RMIT in China. I hope I can have a wonderful time with you on the collaboration and we can achieve a satisfying grade finally. To be honest, I have no working experience except uber food delivery. My interest in IT comes from the videos on YouTube in which the YouTubers do something really cool using some IT technologies, such as VR and programmable robots. I also watched some ads about RMIT on YouTube before I attended STEM college. I never got an IT job in the past and I have no IT experience. I am good at doing some research on the ability of our project to earn money or its market potential. My dream is to get a job as a computer system analyst which corresponds to our team's name Kite Dreams. I have spent one year on foundation study about academic writing. However, in this assignment we need to author a report for scientific research which is a challenge for all of us. So, I am glad to hear some advice from my teammates.

Yibo Li:

As can be seen from the results of these tests, I have a more emotional personality than ordinary people, and slightly higher creativity and empathy ability than ordinary people. My love for art and music also enables me to think in a different way. But my weakness is also more obvious, do things not too careful. When I work, I tend to rely on my intuition, and the result is full of uncertainty, because intuition can sometimes make things better, but sometimes it can also mess things up. I think I should listen more to the advice and guidance of members with more experience and professional knowledge in the team. If I set up a team by myself, I will find people who are complementary to me. They can settle down to work, think rationally in dealing with things, and deal with problems carefully

Zicheng Hong:

Hello, my name is Hong Zicheng. I come from China and I am currently studying in Rmit. My name is S3882476. Currently studying as a student at RMIT. About the reason? Rmit is the only university I know of in Melbourne that has a campus setting and also allows distance learning and even overseas study methods. I am classified as a diplomat (ENFJ-T) hero, whose key words are thoughtfulness, idealism, altruism and compassion. As a test, it does have some reference value. As a conclusion, it seems that I support the team, it is possible to be altruistic, plan from the status quo to help teammates ride on the right path and to my advantage, I can learn better from the group, and most importantly I can hear others' suggestions to make changes. This exam gave me a new understanding of how to find the right people in the group, study in the right way, and work in the future.

Andi Wang:

My name is Andy Wang. My student id is S3893716. I come from Fujian Province, which is in the southeast of China. On weekends, my favorite hobby is playing computer games, especially FPS games like Tom Clancy's Rainbow 6 Siege. My ideal job is to be a software engineer in the future. Even though I don't have relevant working experience, I will pursue my dream in my own way. I am a college student at RMIT and I am still studying information technology. I have one year's working experience in local market and another half year's working experience in warehouse. My personal advantage is that I can bear hardships and work independently. When I find a new job, I will first study how to encourage myself to work quickly and efficiently. On the other hand, I am a rational and easy-going person, and my behavior is not easily controlled by my bad emotions, because I don't want to make mistakes or make others uncomfortable and embarrassed. In terms of communication, although I am not active in heart, I have a healthy relationship with friends, because I have good communication skills, which helps me to manage my relationship with friends. Meanwhile, I also express friendly expressions to colleagues at work. I like to stay in a quiet environment because this strategy relaxes my mind and I can pay more attention to what I plan to do.

Zehua Li:

For myself, I come from a very small city in Guangzhou called Zhongshan, but it is also the area of "Sun Yat-sen", a great man who is also known as the father of modern China. I finished my junior high school courses in China and then I moved to Portugal, a beautiful European country to continue my senior high school courses. As for my interest in IT, I can say IT was for VR technology, IT started when I was in grade 10, I played PlayStation a lot, and I noticed that one of the games I played called "Resident Evil 7: Biohazard" had a VR version! I bought a PS VR and tried it out, which made me feel like I was playing the game for the first time, and although I forgot to take it off before going to bed, it was a nightmare, the experience still shocked me for a long time. I went to the UK for the first time for my university course, but for some personal reasons I decided to start a new chapter in Melbourne! A lot of my friends say it's a great place. I first became interested in the game programming class at RMIT. But after I finished the basic course, I was told that the course had been closed, but that didn't end my love for VR. So I decided to continue to improve myself in IT courses. I'm excited to learn more about how to create a better user experience in this area.

Quanrong LIU:

My name is Liu Quanrong, and people usually call me Leo. My RMIT email address is S3612232@student.rmit.edu.au. I am from China but have been in Australia for 5 years and got a master's degree in Accounting and a permanent visa in 2020. I am currently living in Tasmania and will soon be moving to Melbourne. I have a dog named TiMi, which is also the name of my partner's favorite game development studio. It is the Japanese equivalent of Spitz and is very rare in Tasmania, where people are usually interested in its color and shape. To be honest, I think the test results are accurate for me, I really can't be a leader, but I can be a real team player because I care about other people's feelings and can get things done accurately. It also says I'm good at visual learning, which is true. I often get confused when READING a book and usually need some real examples to help me understand abstract concepts. I think I can be a caregiver in the team to make our working environment healthy.

Team Profile (Subsection):

I am Zeyu Duanmu, I am responsible for this section after the group meeting. In the following content I will talk about the personalities of our group members and what effects they have when we work as a group. I am "Turbulent Logician" ('Your Profile | 16Personalities' n.d.). I done an online creativity test and I got a score of 53. I am looking forward to change my innovation ideas about project ideas because this creativity test website also suggests me that Listening to others and telling them about your new ideas can make them better ('How Creative Are You?': n.d.). I am a tactile learner shown by the result of an online learning style test. The activities about touching and movement can help me learn more efficiently ('What's Your Learning Style?' n.d.). Quanrong said that I really can't be a leader, but I can be a real team player because I care about other people's feelings and can get things done accurately. It also says I'm good at visual learning, which is true. I often get confused when READING a book and usually need some real examples to help me understand abstract concepts. I think I can be a caregiver in the team to make our working environment healthy. When Andi takes on a new job, she first studies how to encourage herself to work quickly and efficiently. Andi is a rational and easy-going person, and his behavior is not easily controlled by bad emotions, which makes it difficult to have bad conflicts among team members. Andi has good communication skills, which makes the discomfort and embarrassment among team members disappear. It helps our group bond. Meanwhile, Andi is always friendly to team members at work. Zicheng is the roommate of me in OLC and I promise he is a man good at listening to the suggestions from others, he is going to perform his advantage in our group work because group members in group4 like offering others good suggestions from time to time. I can learn better from the group, and most importantly I can hear suggestions from others to make changes. Zehua is a VR enthusiast and has been in touch with VR equipment since childhood. His Project Idea is also about VR equipment. Therefore, in this assignment, he will complete the introduction of VR work and analyze VR Industry Data. At the same time, he will also complete part of IT Technologies for our group. Yibo's outstanding creativity can provide the team with innovative power. When team members encounter difficulties, their sympathy will be aroused. Yibo believes that he needs the team to provide him with more experience and professional knowledge for advice and guidance. In teamwork, Yibo are good at finding people who complement them. They can work together and think rationally.
